

PRELIMINARY AMENDMENT
New National Stage Entry Application of
PCT/FR2004/001475

Please add the following new Abstract of the Disclosure:

A moulding device for the production of containers in thermoplastic material, by blowing or blow-drawing, including a mould with two mould halves mutually mobile and provided with a locking device with two lock elements extending over the total height of the respective mould halves and provided with a number of projecting fingers in catches spaced at intervals, one lock element being fixed on one mould half and the other lock element sliding on the other mould half under the action of an actuator device.
